

I am very concerned about the concept of transmitting high frequency signals over unshielded power lines (PLC). The interference generated by such a scheme will be intolerable to broadcast receivers and violates a basic tenant of preserving quiet airspace so that broadcasts, both amateur and commercial, may be made with a minimum level of power.

Please reject any and all efforts to propagate high frequency signals (those which could result in RF emissions) over unshielded lines.

Thank you,

William R. Palmer
